

Medina Beneficial Microbes is a water soluble powder that contains a concentrated blend of naturally occurring microbial cultures adapted to assist in soil improvement, nutrient release, organic decomposition and nutrient recycling. For best results apply with a hose end sprayer or pump up sprayer to soils that are moist or just before irrigation or rain. Beneficial Microbes can be added to aerated compost teas 1/2 way through the brewing process.

Application Rate: Mix 1 teaspoon of Medina Beneficial Microbes with a quart of water and agitate for at least 5 minutes. The diluted solution can be saved for up to 12 hrs without aeration but should be applied within that period. Spray the Quart of solution on 1,000 square feet of surface area. This 4 ounce Jar will treat 24,000 square feet.

Compatibility: Medina Beneficial Microbes can be used with application of Medina Soil Activator, Molasses and Growin Green. Do not mix with High Salt Content Fertilizers or herbicides.

Shelf Life of powder is 1 year.
